Issue Identified:

I identified unnecessary water wastage while brushing teeth, where the tap was left running continuously instead of being turned off when not in use. This leads to a significant amount of clean water being wasted daily.

Action Taken:

Before taking action, I captured a photo showing the tap running continuously during brushing. I then turned off the tap and used water only when needed for rinsing. After fixing the issue, I captured another photo showing the tap turned off while brushing.

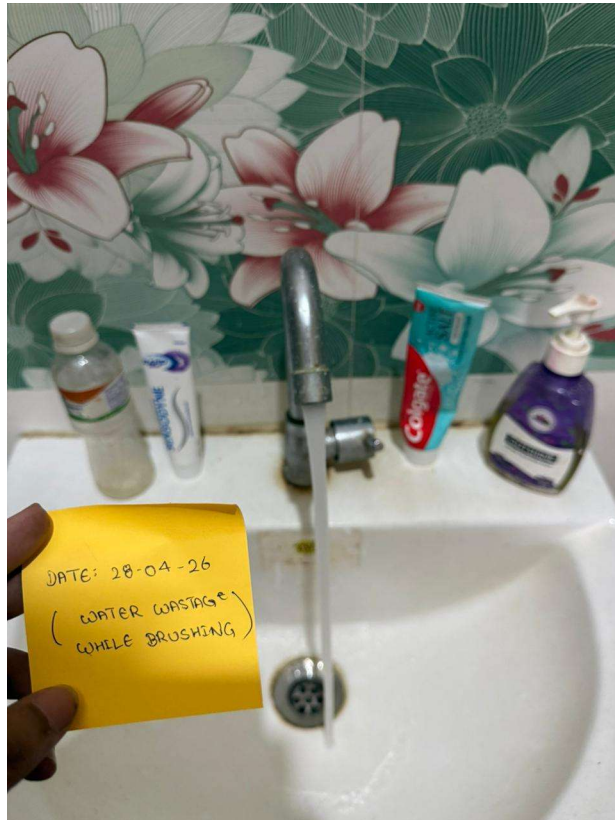

Why This Action Is Important:

This action is important because leaving the tap running while brushing can waste several liters of water each time. By turning off the tap, water consumption is reduced, helping conserve a valuable natural resource. Practicing and promoting such habits can lead to long-term environmental benefits and more efficient water usage.

Before:

The Water Tap was
Open while brushing
Teeth.

Seen in many households.

After:

The Tap was closed when
not rinsing/ not in use.
