

AADK 3 - Task 3 — Planning a Simple Layout with Text + Image

Student Name: Rajat Prakash Dhal

Course/Unit: Android Development with Kotlin – Session3

USN: 1hk22cs115

email: 1hk22cs115@hkbk.edu.in

✓ **App Concept: Birthday Greeting Card**

1 Screen Purpose

The purpose of this screen is to display a visually appealing birthday greeting card with an image banner, a celebratory title, a heartfelt message, and a button to share the greeting.

2 Wireframe / Screen Illustration

Wireframe (Structured Layout)

	[Birthday Banner Image]	
	 Happy Birthday! (Title)	
	Wishing you happiness and	
	success today and always.	
	[Share Button]	

Composable Structure & Labels

- **Column** (Main vertical layout container)
 - Image (Top banner image)
 - Text (Title)
 - Text (Message paragraph)
 - Button
 - Text (Button label)

Spacing & Padding Plan

- 16 dp padding around the entire screen
- 16 dp between image and title
- 8 dp between title and message
- 24 dp between message and button
- Image: fillMaxWidth()
- Image height: approx. 200 dp
- Button width: wrapContentWidth() or fillMaxWidth(0.7f)

Resource Plan

Image Resources

Image Purpose	File Name	Folder Choice	File Size
Birthday Banner	birthday_banner.png	drawable-nodpi	Medium

Reasoning:

- Stored in drawable-nodpi to avoid automatic scaling.
- Optimized PNG (compressed).
- Approx size: 200–400 KB (medium).

Text Styling Plan

Text Element	Font Size	Style	Color Token
Title	24 sp	Bold	primaryTextColor
Message	16 sp	Normal	secondaryTextColor
Button Text	14–16 sp	Medium	onPrimaryColor

Reflection

Selecting the right composables and resources before coding creates a clear structure and reduces confusion during implementation. Planning spacing and image placement prevents layout overlap and alignment problems. Choosing correct density folders and optimized image sizes improves performance across devices. Overall, structured planning saves debugging time and ensures a more consistent and professional UI design.
