

Task 3: Design Your First App Idea (Concept + UI Sketch)

Name: Rajat Prakash Dhal

Email: 1hk22cs115@hkbk.edu.in

USN: 1hk22cs115

Objectives

- To develop creative thinking and app ideation skills.
- To understand the importance of defining an app's purpose and target audience.
- To identify and plan core features before implementation.
- To design a basic UI layout (wireframe) for the app's main screen.
- To connect conceptual planning with Jetpack Compose UI elements.
- To enhance documentation and presentation skills.
- To build early-stage product design and usability awareness.

Introduction

In this task, the focus shifts from writing code to thinking like a product designer. Before building an Android application using Jetpack Compose, it is essential to understand the importance of planning, user experience, and interface design. This activity encourages creative thinking by asking students to conceptualize a simple app idea, define its purpose and audience, and visually design its first screen layout. By combining logical planning with visual representation, students develop the ability to transform ideas into structured app designs. This process strengthens both technical preparation and design empathy, which are crucial skills for professional Android developers.

1. Concept Creation:

App Name: QuickNote Lite

Purpose (What problem does it solve?): QuickNote Lite helps users quickly write and save short notes without opening complex note-taking apps. It solves the problem of forgetting small but important information like reminders, ideas, passwords (non-sensitive hints), or quick thoughts.

Target Audience:

- Students
- Working professionals
- Anyone who needs to quickly jot down short notes

Top 3 Core Features:

1. **Add Quick Note:** Users can type a short note and save it instantly.
2. **View Saved Notes List:** All saved notes are displayed in a simple vertical list.
3. **Delete Note:** Users can remove notes they no longer need.

One Unique Feature (What makes it stand out?):

1. **One-Tap Quick Save Mode:** When the app opens, the keyboard automatically appears and the cursor is ready in the text field — allowing users to immediately start typing without extra clicks. This makes it faster than traditional note apps.

2. UI Sketch / Wireframe:

QuickNote Lite

Capture your thoughts instantly

TextField – Note Input

Type your note here...

Button – Save

Save

Text – Your Notes

Text – Note Content
Buy groceries

Text – Note Content
Schedule meeting

Text – Note Content
Call parents

Text – Note Content
Read book

3. Design Reflection:

- **Why did you choose this app idea?**

I chose the QuickNote Lite app idea because it is simple, practical, and useful for everyday life. Many people need a fast way to write short notes without opening complicated note-taking applications. This idea focuses on speed and minimalism, which makes it ideal for beginners to build using Jetpack Compose.

- **How does your design make it simple or enjoyable to use?**

The design is simple because it follows a clean vertical layout with clear sections — title, input area, and notes list. There are no unnecessary features, which makes the app easy to understand and quick to use. The large input field and clear “Save” button improve usability, while the floating action button makes adding notes feel fast and intuitive.

- **Which Compose UI elements (like Text, Column, Button, Image) would you likely use later to build this UI?**

To build this UI in Jetpack Compose, I would use:

1. Column for arranging elements vertically
2. Text for titles, subtitles, and note content
3. TextField for note input
4. Button for saving notes
5. LazyColumn for displaying the notes list
6. Row for aligning note text and delete icon
7. IconButton for the delete action
8. FloatingActionButton for quick note creation

4. Color Scheme and Typography

Color Scheme

1. Modern Minimalist (Clean & Tech)

Charcoal Slate Blue Off White

2. Earth & Nature (Organic & Warm)

Forest Green Terrecotta Beige

3. Vibrant Pop (Energetic & Bold)

Electric Purple Neon Teal Yellow

Typography

1. Sans-Serif (The Modern Standard)

Aa

Aa - Clean lines, geometric shapes.
Best for: Digital screens, UI design, modern headings.

2. Serif (The Classic Elegance)

Aa

Aa - Decorative strokes, varied line width.
Best for: Editorial, luxury brands, print media.

3. Script / Display (The Creative Flair)

Aa

Aa - Fluid, handwriting-style.
Best for: Invitations, logos, creative headers.
