

AADK 4 - Task 3 — Layout Review & Improvement Plan (Business Card UI)

Student Name: Rajat Prakash Dhal

Course/Unit: Android Development with Kotlin – Session 4

USN: 1hk22cs115

email: 1hk22cs115@hkbk.edu.in

1 Screenshot Captured

- Phone (Portrait – 6.1” screen)
- Tablet (Landscape – 10” screen)

2 Layout Review

✓ A. Visual Alignment & Spacing

Phone Version

- Title and subtitle are centered properly.
- Contact rows align consistently with equal spacing.

- Outer card margin (16dp) looks balanced.
- Slightly tight spacing between subtitle and contact section.

Tablet Version

- Horizontal layout (Image + Text Column) looks structured.
- 32dp padding improves breathing space.
- Contact items align well but could benefit from slightly wider spacing.

Observation: Overall alignment is consistent, but vertical rhythm can be refined.

B. Readability

- Title (28sp) is clear and prominent.
- Subtitle (18sp) readable, but slightly small on large screens.
- Contact text (14sp) readable on phone but slightly small for accessibility scaling.
- Good contrast: Dark text (#212121) on white background.

Issue Identified: Contact text may be small for users with larger font settings.

C. Resource Usage

- Profile image stored in drawable-nodpi.
- Image resolution: 512x512 (optimized, not excessive).
- No unnecessary large assets.
- Icons use vector drawables (recommended for scaling).

Conclusion: Resource handling is efficient and scalable.

D. Responsiveness

Phone Layout

- Vertical Column works well.
- All elements remain visible without overlap.
- Good spacing but could use adaptive font scaling.

Tablet Layout

- Switched to Row layout (Image left, text right).
- Increased padding to 32dp.
- Better distribution of empty space.

Potential Improvement

- Could use BoxWithConstraints to dynamically switch layout.
- Could adjust font sizes proportionally for large screens.

✅ E. Accessibility & Usability

- Image has contentDescription.
- Icons visually clear.
- Touch target for contact rows ~44dp (should be 48dp minimum).
- Good text contrast ratio.
- Layout supports font scaling (no fixed height containers).

Issue Identified: Touch targets slightly below recommended 48dp.

3 Improvement Plan

Issue	Proposed Fix	Priority
Contact text slightly small	Increase from 14sp → 16sp	High
Touch targets under 48dp	Add Modifier.height(48.dp) to rows	High
Slightly tight spacing under subtitle	Increase spacer from 24dp → 28dp	Medium
Tablet empty space could be better balanced	Increase spacing between image and column	Medium
Improve dynamic responsiveness	Use BoxWithConstraints to switch layouts automatically	Medium

Issue	Proposed Fix	Priority
Enhance hierarchy	Add subtle divider between header & contact section	Low

Reflection (3–4 lines)

This evaluation helped me understand that good UI is not just about appearance but also spacing consistency, accessibility, and responsiveness. I learned that touch target size and font scaling are critical for usability. Reviewing the layout from multiple screen sizes revealed improvements I would not notice on a single device. In future Compose projects, I will always test across different devices and evaluate layouts systematically before finalizing.
